WIND AND AM

ADVERTISEMEMT.

A Small number of the present little Work was originally printed and distributed by the Author, a gentleman of extensive property, and unlimited philanthropy, at Hamburgh. For the information of his friends in Great Britain, without any intention of extending the circulation, but frequent inquiries having made the re-publication necessary, a friend of the author's*, sensible of its admirable tendency, has ventured to grant his permission to reprint it, as well as to affix the author's name; at the same time hoping that the public utility of the little Tract will apologize for so great a freedom.

APRIL 25, 1796.

EMPLOYMENT AND SUPPORT

Prilons, and all the & Aguirrous monuments of

THE POOR.

In our convertation on thele subjects, I often mentioned the success our endeavours in Ham-

Lothers district

DURING a refidence of fixteen months in this happy island, where a long enjoyed security of person and property has called forth, in all ranks, the incalculable powers of human industry, and where domestic comfort rewards every exertion, from the philosopher's study down to the labourer's thatch; such a mass of powers produced, and of happiness enjoyed, strongly attracted all my attention. I admired the daily wonders of industry, the animated exercitons

exrtions of public spirit, and that unbounded active benevolence, become so habitual amongst you, that hardly you yourselves are conscious of its extent. It was to each of you, my respectable Friends, that I have been obliged individually for that information I was so forcibly led to defire: It was you that conducted me to your Hospitals, Workhouses, Magdalen-houses, your new Prisons, and all those numerous monuments of British sensibility.

In our conversation on these subjects, I often mentioned the success our endeavours in Hamburgh had met with, in suppressing beggary, encouraging industry, restoring health, and promoting morality, among a numerous class of

in all ranks, the incalculable powers of hereon

You seemed all to think, that in England some consequences of the existing poor-laws made it difficult to obtain these advantages in a degree adequate to the large sums expended a that not only the right which a poor family

exertions

has, of living at last at the expence of the parish, encouraged careless idleness; but also that the annual rotation of overseers, the want of uniform system in the distribution of different kinds of support, and of a general plan for making them concur in promoting the morality, and consequently the happiness of the supported class, required some alteration in the management of the immense suppliess allowed by that generous country to the wants of her poor *.

The poor-rates are allowed to amount to two millions and a half Sterling. It is certainly under the froth, to state at a million more the sums expended through the Island, in Holpitals of all kinds, and in Workhouses: if to this are added those large sums distributed annually by the beneficence of the Noblemen and Gentlemen in their country residences, numberless subscriptions for immediate relief, &c. I make no doubt, that the sum of British charities amounts to near five millions a year. This is certainly too much Supposing the extravagant proportion of one man in ten wanting support; in a population of nine millions, L.5 Sterling would fall to the share of each pauper, out of which number undoubtedly one-fourth part is able to perform some work, and the half capable of doing a good deal towards earning their subsistence.

SHREWSBURY and Glasgow † have shewn what advantages may be obtained, even by a partial deviation from the plans usually sollowed in both parts of the Island. The similarity of the principles they had adopted, with those to which we in Hamburgh owe our success, was striking, and induced you to defire me to give you a more circumstantial account of our institutions.

It is certainly a duty in me, to give you back the little I can give, for the much I have received. The reason why I do not think it unworthy of your notice is, that it is not an ideal scheme, so easily formed by a warm heart and a lively fancy; but a real experiment, tried for these fix years past, in a population of one hundred and ten thousand inhabitants, who have the missortune to feed about seven thousand

by that penerous country to the mants of her

poor, besides two thousand five hundred more in their different hospitals. Give me leave, before I proceed, to premise a sew general ideas, of which the following sheets will contain the application.

circle of the questing colling and constitute

NATURE seems to have destined all her children for a state of continual exertion; and their persectibility perhaps depends on the unceasing exercise of their powers for ends never completely attainable. These objects increase in number with the more enlarged sphere of our ideas. In the most numerous classes of men, bodily wants are the main object of their toil, and they struggle only to preserve life. In this contest with necessity, all are not equally successful, not equally attentive, assiduous, sober, saving, orderly, honest, and prudent.

WE generally blame them for it, as if those qualities were so very common in the higher classes,

classes, and as if corruption did not always

fore I proceed, to premile a few general ideas.

Put among these poor there are not only victims of incapacity, folly, and vice, to whom public justice owes instruction and correction:

I am afraid that by far the greatest number of poor in Europe is of a very different defeription.

THROUGH a concurrence of numerous circumstances, the price of labour and of the necessaries of life is in a very unfavourable proportion for the poor in most countries of Europe.

ceafing exercise of their powers for ends never

A MAN who lives by fuch labour as requires nothing but bodily strength, has still a right to expect such wages as may enable him to live comfortably; this, in Britain, is to live in dry and healthy lodgings, eat sound provisions, sufficient to support his labour, to be sufficiently covered against the inclemency of the weather, and

ta

to appear with a certain eleanliness on Sundays: to rear his children decently, and lay by fomething to live upon when age has deprived him of his strength. This is indeed the situation of the labouring poor in all new focieties of men: there he earns even beyond this, till augmenting population lowers the price of labour, and raises the necessaries of life. Then hard labour procures him no more than a small pittance, upon which he barely lives,-little for comfort, less for the education of his children, and nothing to depend upon in those times when labour is wanting, when fickness confines him, or a rigorous feafon requires more food, more clothing, more firing, at the very time when labour is scarce: then he fells or pawns his bed, his tools, his every thing, till dispair of his fituation takes from him fobriety, order, affiduity, and œconomy: He first gets into drunkenness by his misery, and, by a fatal circle, is miferable for ever by the habit of drinking. Sloth, beggary, and all the train of vices that attend them, destroy completely his industry;

and

and if this fituation has lasted for some time, he is irrecoverably lost to order and regularity.

things to five poon when she has deprived

In the fouth of Europe, where the climate is mild, men wanting but little food, less cloathing, and hardly any shed, numbers live in that state, the life of a savage in the midst of civilization, reconciled to it by habits of security and independence, and by the indulgence of libertinism and idleness: Thousands throng at the gates of the monasteries in Spain for some soup, which they receive as a tribute. In Naples forty thousand lazaroni are dreaded by despotism itself.

In those countries adultery and prostitution are common, the sources of life are tainted by dreadful disease, spies are easily obtained, and assassing are cheap.

In northern latitudes, where more food, more cloathing, and where a bouse are wanted, the effects of misery are more severely felt. Many, many

many fall a flow facrifice to chill penury, and starve for months or years. But here the remedy is much easier. Pity prompts to relieve obvious distresses, and the sharpness of want urges men to its antidote, labour.—In repairing, however, those evils, which society did not, or could not prevent, it ought to be careful not to counteract the wise purposes of nature, nor to do more than to give the poor a fair chance to work for themselves. The present distress must be relieved, the sick and the aged provided for; but the children must be instructed; and labour, not alms, offered to those who have some ability to work, however small that ability may be.

In all the west of Europe, there is hardly a country where the sums which public and private benevolence bestows upon the poor, are not more than adequate to these purposes; but mismanagement has employed them, with very sew exceptions, as a reward for sloth, idleness, impudence, untruth, has reared new genera-

The greature's of the evil court as last earry

maate

disgusting profligacy.

medy is much eaties. Pity prothest to minera

UNTHINKING pity has rashly stopped that natural course of things, by which want leads to labour, labour to comfort, the knowledge of comfort to industry, and to all those virtues, by which the toiling multitude so incalculably adds to the strength and happiness of a country: And while it neglects that respectable poverty which shrinks from public sight, it encourages, by prosuse and indiscriminate charities, all those abominable arts which make beggary a better trade than a workshop.

THE greatness of the evil must at last carry a remedy along with it. It was intolerable in Hamburgh: when the public, disposed by some speculative discussions on the subject, and encouraged by some private successful exertions, resolved to make it the object of their serious consideration: They largely contributed the money that was requisite; and, what was a still greater

that ability may be. .

greater facrifice, many of them gave their personal assistance in guiding the benevolence of their fellow-citizens into a proper channel. Two bundred of our most respectable inhabitants have been thus employed for the last seven years; and, during that period, hardly a beggar has been seen in Hamburgh.

THE following general account, will, I flatter myself, show, that not only we did a great deal towards the actual relief of our poor, but that we have gained already some steps towards the more desirable, yet but slowly attainable end, of preventing some of the causes of poverty.

Historial lateral for appropriate advantagement

As a still more minute detail, however, may be desirable for those who actually engage in such an undertaking, I must refer to a volume of Laws and Bye-laws, printed at Hamburgh, 1788; and to a volume containing sixteen Reports, given successively to the public from 1788 to 1794. They are deposited, along with

varent cheaprels and number of female fer-

all other papers concerning this establishment, with Mr. Creech at Edinburgh, who will be so good as to communicate them to any of those to whom this Letter is addressed.

To the general causes of poverty, we have to add, in Hamburgh, the inclemency of our winters; the fluctuation of several branches of trade on which the poor depend for their sub-sistence; the number of people attracted out of the poorer adjacent countries, by the expectation, often disappointed, of finding employment or support in a large commercial town, whose inhabitants have ever deserved the reputation of generous benevolence; and lastly, the extravagant cheapness and number of semale servants, whose wages on an average do not exceed L. 2, and whose number is computed to be near sisteen thousand.

I AM forry to add, that meat and bread pay from 15 to 25 per cent. and beer feveral taxes exceeding 60 per cent. It is clear, from the first of these two last circumstances, that a number of women must remain unprovided for, when their age renders them unsit for service: For the second, that this excise being limited within the walls of the town, our Holsatian and Hanoverian neighbours have a great advantage in carrying on manufactures in competition with our poor.

Some years previous to 1788, a fociety had united for giving relief to the indigent fick. Another fociety had procured flax and spinning-wheels, established a spinning school, and given work to all those who chose to work: their number yet was comparatively small.

Some other humane gentlemen made perfonal visits among the poor, and, by giving their history to the public, awakened its attention to the sufferings of this numerous class, shewing, at the same time, the necessity of a general measure.

I lay some stress upon these preliminary es-

fays; partly from my conviction, that the success of such an undertaking depends wholly on the degree in which the public at large is satisfied of its necessity; and partly, because I think that no man is entitled to recommend the execution of any important plan, till it has been already tried upon a smaller scale, and till its parts are in some measure organized for immediate use.

THE magistrates took up the business with a zeal adequate to its importance: the outlines of a plan were agreed upon; it was decided, that such revenues as had till then been expended in alms by the several churchwardens, and those whose administration had been connected with the work-house, should be united, under one administration, with those sums that could be collected from private benevolence.

Santa years provided to 1788, a focused was

In their meetings to which (analogous to the organization of those boards by which public business is conducted at Hamburgh) several other members of the commonwealth were added of the most important decisions, the whole of the plan was, during six months, fully prepared for execution.

For the use of the above named 180 gentlemen, whom I shall call Overseers, very ample instructions were published.

bas williage to redering our fam a street establish.

ideas tissy definishing containing cach a nearly

ACTUAL relief was the first object; for we all were convinced of the barbarity of preventing beggary, when provision for real want is not previously prepared; but at the very moment that this provision was secured, measures were taken, to prevent any man from receiving a shilling which he could have been able to earn for himself.

This is the basis of every solid provision for the poor: with it every establishment must stand stand or fall, become the blessing or the bane of the lower classes of society.

Our overseers got printed interrogatories which they were to propose to each poor family. The answers were written upon the white column of the page, and verified by a personal visitation, and the evidence of their neighbours.

MANY queries were calculated for knowing the average earning of each member of the family; but this was not a point eafily fettled.

Few answers were sincere; and it being the interest of the poor to make their capacity for work appear small, all the tricks were employed which the habits of beggary had rendered but too familiar. The state of health was determined by a visit from a physician and a surgeon.

We now began to make an exact calculation of what each pauper wanted for bare subsistence: we went down as far as 2 s. a-week; but in the course of our investigation about the earnings of 3500 families, we were assonished to find, that we were still above that sum with which a considerable part of our poor could make a shift to live.

It was our determined principle, to reduce this support lower than what any industrious man or woman in such circumstances could earn: For if the manner in which relief is given is not a spur to industry, it becomes undoubtedly a premium to sloth and profligacy.

VERY little was still gained; for the poor might even with the bare pittance remain idle, or they might receive this support very undefervedly, if, in the mean time, a more lucrative employment had offered; the want of which was the cause or the pretext of their claims.

At this period of the business, that private society, which had successfully established a slax-yarn spinning manufacture, gave it over to our institution; the stock, the organization of the whole, the very able teachers and officers, and all the experience acquired in several years, along with it.

Six fevenths of our poor being women and children, we pitched upon this kind of work, because,

- I. The material is cheap;
 - 2. The fale always fure;
 - 3. No nice workmanship is required;
- 4. It is easily learnt, and of use at all times to the instructed poor;
- 5. It can be done by weak and robust, by old and young people, with a difference in the produce of labour proportionate to their capacity for work:
- 6. Because the work can be exactly ascertained by measure, and by seeing a woman spin an hour,

D 2

it is perfectly easy to say what she is capable of doing in a day.

A most essential point was, not to pay the fpinning by the weight, as there is always a great deal arbitrary in valuing the fpinning, but by measure. We fold the clean flax to the poor at a certain low price, and bought a certain measure of yarn again from them at a high price: Thus, to whatever fineness the yarn was fpun, it was the profit of the poor. This price was 30 per cent. above the usual spinning price; fo that we were fure that all the yarn would be brought into the office we established for that purpose. Every pauper brought his book continually with him, wherein the pieces delivered were noted: Thus he had always with him a certificate of his industry, and we a continual average of the state of industry of our poor. But this establishment procured us many still more effential advantages; -we could now fafely offer relief to all forts of poor, because we had it now in our power to make them comply with the only condition required, that they should use towards their support all the exertions they still were capable of. Accordingly the over-seers went through their districts, and asked, in all such mansions as could be supposed to harbour want, if the inhabitants stood in need of support. The question to all such poor as wished for relief, and were able to spin, was, Whether they did earn by their work 1 s. 6 d a-week? for experience has taught us, that many poor live upon that som; and we knew enough of our poor to suppose, that 1 s. 6d. avowed earning was equal to something more.

Ir the answer was affirmative, the pauper stood not in need of weekly assistance.

Is it was negative, we gave him work, which, by being paid 30 per cent. above its value, afforded him 1s. 6d. a-week easily, if he was even an indifferent hand. The far more frequent cases were partial inability by age, or weak-

weakness, or want of skill. For poor of the latter description a school was opened, and in three months time the business was easily learnt. During that time, the pauper got first 2 s. a-week, and every week afterwards 2 d. less, till in the twelsth week he got nothing at all but his earnings, and was dismissed, with a wheel and a pound of flax gratis.

THE quantity of work which disabled poor were capable of doing in a week, was easily and accurately ascertained by a week's trial in the spinning-school. The result was produced weekly before appointed members of the committee, and the sum which the poor could earn, was noted down in their small books. The overseer was directed to pay them weekly what their earnings fell short of 1 s. 6 d. in every such week when it appeared from their books, that they had earned to the known extent of their abilities.

From that moment, applications became less frequent; and we had an infallible standard for distinguishing real want: for whenever the pauper, if in health, (if not, he was peculiarly provided for,), had not earned what he could, then he had either been lazy, or had found more lucrative work; in either case, he was not entitled to a relief for that week, whatever he might be for the following.

This has constantly held good during these six years; and whenever, by some relaxation of regularity on the part of the overseers, the sum of the relief has been in some years larger, we always sound, that the thermometer of industry had been lower, viz. less yarn spun; and that whenever, as in the summer 1792, the principle was enforced, again the industry encreased accordingly.

I have been particularly minute here, as I am convinced, that it is to this measure alone we owe our success.

It is obvious, why it was necessary to chuse but one kind of work, because in this way only the different degrees of industry in the different poor could be compared; and why such a kind of work was chosen, as could leave to no under office the smallest arbitrary power: A kind of work, lastly, where it was impossible to be cheated either by the poor, the seller, the buyer, or the servant.

This gave a pivot to the whole superstructure, and a simplicity to our complicated machine, without which I do not think it could have stood one year.

This fimplicity lost very little by our employing the men and boys in making rope-yarn, picking oakum, or cleaning the streets and mending the roads at 4d a day. All this work was calculated upon the same principle.

But want of employment for poor in tolerable health is but one fource of mifery; old age, and and incurable diseases, sickness, and the difficulty of supporting a numerous family, were evils which also called for assistance.

For the first, we provided an hospital; and, in some cases, gave to individuals the money which the boarding in the hospital would have amounted to.

Stanlar atticle of movers, under the firme of

Midwives were appointed, one for each twelve districts; who, upon the request of the overseer, (a request which he was bound to make whenever applied to), went immediately to the lodgings of the patient, if he or she was not able to appear at the appointed hour of the day at the physician's or surgeon's house. These were obliged to make an immediate report, and to note down in a book, kept at the house of the directors of these twelve districts, how far the cure was advanced, and the moment when the patient was able to work again. Till that moment, the physician prescribed, not only the

diet, which was got, according to previous contracts, from the traiteurs of that quarter of the town, and the medicines, which were made up at very low prices after a pharmacopaia pauperum which we had carefully revised; but he informed the overseer of what money he thought necessary for supplying the want of labour, and the extraordinary expences. This made a particular article of support, under the name of siek-money, which was given with the greater liberality, that no bad effects could possibly arise from indulging here those seeings, which it is the hardest task of every overseer to restrain.

A numerous family is too heavy a burden, not only for poor reduced to the lowest earnings, but even for many an industrious couple in a better way of employment; too heavy, in all cases, upon widows.

Two ways offered to provide for them; the one, to take such children into an hospital; the other,

other, to give to the mother an allowance in money.

WE were very averse to the first, and the poor mothers would have been still more so. May all the favourers of those houses, such as they are. feriously reflect, if the advantages they offer can compensate for the education of the heart which nature yields in those huts of poverty. where both parties become so necessary to each other, and where heroic exertions of parental and filial piety are not feldom become habitual. Would the humane and philosophical overfeer look through the rags and the fifth of pale mifery, calculate the facrifices daily made there in many families, and amongst neighbours, and enjoy the rapture with which a mother embraces her fon, whom the fees swallow that crumb of bread the refused to her own wants; the annals of the poor might reconcile him to human nature, when disgusted with the list of crimes which blacken the page of history.

E 2

OH

On the other hand, it is but too true, that, misery and drunkenness, particularly in the male poor, lead to the neglect of their unhappy children: nor can it be doubted, that in this manner, many fall victims to wretchedness and immorality.

WHEREVER children under fix years were in this unhappy fituation, we intended to board them in the houses of the better fort of poor; and many a good motherly woman we found, who became an excellent nurse.

In other cases, we allowed the mother from fix to twelve pence a-week for each child; and we are now busy in preparing in every parish a warm room, and bread, milk, and potatoes in plenty, where such parents as go out to work may deposit their children during the day, and thus prevent any obstacle to their own industry, or to that of their elder children.

would be specially the special date.

WE determined to oblige them to fend all their children from fix to fixteen to school, in which they shall work two-thirds of the time, and the remainder of it be instructed in reading, writing, casting accounts, religion, and churchmusic.

We determined, and this is the second hinge upon which the institution turns, That to no family any relief should be allowed for a child past six years; but that this child, being sent to school, should receive, not only the payment of his work, but also an allowance, in the compound ratio of his attendance at school, his behaviour, and his application to work; which amounted to an average of twelve or eighteen pence a-week, exclusive of other premiums.

By this measure the number of children, far from being a burden, became a great convenience; for the greater the number of individuals messing together at a certain rate, the better their fare, and the cheaper. By these means we as effectually excluded those parents who did not wish to send their children to school, as we had excluded those that did not chuse to work; and children became accustomed to look from their infancy upon the means of subsistence, as the recompence of labour, or at least of exertion.

How this was modified, and what other views were obtained by it, will appear hereafter. I wish only to state the principle here.

In the above proportion of 2s. a-week, an allowance was made for lodging; but as this is paid every fix months, and the pauper receives his allowance weekly, it feemed to us to require more than common fortitude in a perfon thus circumstanced, to refuse to himself the muchwanted comfort which the 4d. a-week he ought to lay aside for the house-rent of his family could have procured him, were it continually in his reach; he would, of course, run in debt, and become ruined again.

WE reduced, therefore, twenty-four pence to twenty pence, and paid his rent to the landlord; and thus we not only got him out of debt, but procured him a warmer and more comfortable lodging than what otherwise he could have had a right to expect.

In the mean time, while we were employed in establishing schools for five or fix hundred grown poor, and schools for about a thousand children, and in organizing our medical establishment, the overseers had prepared for the Board, as the result of their enquiries, a complete list of the poor, and the necessary details with respect to each of them.

WE knew now all the poor, and having provided means for their relief, we announced to the public, in October 1788, that from that moment no deferving poor perfon could, nor would remain unnoticed. We had lifts printed, diffributed, and annexed to our almanacks, where the names of the streets which had fallen to the

lot of each overseer were enumerated, so that no pauper could plead ignorance of the place where to apply, nor any man in Hamburgh give more effectual assistance to the poor, than in directing them to the proper places.

WE distributed instructions by thousands among the poor, about the means to procure and to employ the obtained relief.

Principle 1

WE entreated the public to inform the directors, if any pauper had not been duly attended to; and I must add, to my infinite satisfaction, that I know of no fact, during six years, where this neglect has been proved.

Or course, all giving of alms ceased, the only effectual way to extirpate beggary. The very wise law, which fined in L. 2 every man who gave charity in the streets, or at the doors, was scarcely found to be necessary.

To fecure the proper execution of fo complitated a plan was rather difficult; but we have been fo fortunate, that, small variations excepted, the machine has gone on these seven years with much less friction than could reasonably have been expected.

This makes it worth while to enter here into fome further details.

THE three overseers appropriated to each district, after visiting and examining the poor, ascertaining the number of their children, and informing themselves, by the report of the physician, of their ability to work, determined (agreeable to the rules abovementioned,)

- 1. Whether any weekly relief was to be allowed, or if only work was to be given.
- 2. Whether bedding or cloathing was to be bought, goods pawned to be released, or old debts to be extinguished.
- 3. Whether fick or school tickets were wanted.

At

At the same time they communicated to the Board what they could collect about the morals of the pauper, and their opinions concerning his circumstances.

WITH regard to the first point, I must beg leave to make the following observations.

THE fituation of our poor in summer and winter is totally different. Every kind of manufactures and garden-work goes on during the former season, at the same time that provisions are plentiful and extremely cheap.

DURING the winter most kinds of labour cease, provisions get dearer and scarcer, and fuel and warm cloathing are new wants.

informing the Activity of the representation

It was absolutely necessary to make different allowances; and accordingly we adapted our interrogatories to that period, in such a manner, as to ascertain every change of circumstances materially influencing the relation of the

the poor to the institution. The new support was regulated agreeably to the information we received, and amounted generally from four to eight pence more in winter than in fummer. During the most severe winter-weeks, four pence was still added, if extraordinary colds happened. The weekly relief was fixed never to be above twenty-four pence, in whatever manner it was paid. We did not allow a larger fum, whatever might have been the former fituation of the poor. This may feem hard in fome instances; but we were convinced, that if the least door was opened to inequality of diftribution, the bad consequences would have been incalculable in an institution of this magnitude; and where all we could do by the strictest rules, was to make 180 gentlemen act in every quarter of the town in conformity to the same principles. We thought further, that if those poor had formerly been in a more respectable fituation, they would be worthy objects of private benevolence, of which no public institution ought to superfede the exertions.

F 2

2. WE

- thing; therefore not only cloathing and bedding were necessary, but their things being pawned, or their being in debt, made it as necessary to get these things back again, and to settle their debts. The only effectual way to prevent their pawning them again, was to mark them indelibly as the property of the institution, which the pauper was to hold only as long as he behaved well.
- 3. I have already faid, that a fick-ticket excepted a pauper from the common rules as long as it was continued, and that a school-ticket for a child was considered as 12 d. given weekly to the parent.

THE proposals of the overfeers about the weekly allowance of the poor, were brought to one of the members of the committee, each of them superintending six of those districts. He was advocate for the institution, as the overfeers

were those of the poor; and all cases being much simplified, they easily agreed.

THE director made his report to the Board with respect to each district separately, and after that the resolution settled for the next six months was wrote down upon the same sheet of paper which contained all the queries made to the pauper, together with his answers, which paper always remained at the overseer's after its contents had been brought into tables in the director's book, containing all the poor of six districts, and their weekly relief. He received weekly from the overseer the account of what was wanted for this fixed support, for occasional relief to sick, for accidents, and for discretionary assistance to such poor whose case could not yet be investigated.

This account of the overfeers was certified by the director, and then fent to the treasurer for payment. THE treasurer makes his balance every week, and presents it every month to the committee, when the ten directors present theirs, which check each other in such a manner, as to make any error impossible.

Our books are closed every Saturday; and out of the very numerous payments made by the treasurer in a year, the smallest could be found out in a quarter of an hour.

VERY foon we found the number of ten directors too small; five others were added, (they are always taken out of the overseers), who constitute a committee,

for the manufactures,
for the fehools,
for the procuring of cloaths, and
for the police of the poor:

All of them have several officers, keep their accounts separate, and once a-month give them to the treasurer and to the board.

THE division of every kind of expences is so scrupuously kept, that no particular branch could be devised, of which the account in certain given periods could not be immediately made out.

AFTER several repeated trials, we had found that there was great waste in leaving the distribution of cloathing to the overseers alone; partly because they paid too dear by creating a competition of many buyers, partly by giving too easily, having no check.

This committee, therefore, bought the cloth, and had the shirts and cloaths made by some of the poor, employing this kind of work at the same time as a means of instruction for their children in the schools. The pauper who stood in need of cloathing, presented to the committee a recommendation, signed by the overseer and the director, and then got the cloaths.

ou cased on actains we begre our infittu-

MERCHIED Coc. 1706. We had before hand

CHILDREN get shirts and cloaths only through the committee superintending the schools, according to their behaviour.

4. Hamburgh is unfortunately fituated in this respect, that, from all the poor countries furrounding, numbers flock in, and among them many foreign poor. It was established, that three years residence should entitle to relief, allowance at the same time being made for accidents, illness, or childbed, which in all cases were thought proper objects of charity. A hospitium was opened for foreign poor, where they could live three days, after which they were forwarded with a viaticum. At the fame time, it was prohibited to receive a stranger, without acquainting the magistrate or the overfeer, under the penalty to bear alone the expence of maintaining the man, if he should become an object of charity within three years.

Upon these principles we began our institution in October 1788. We had before-hand given given to the public the most minute detail of our views, and of the obstacles we met with, requesting its advice at the same time that we so licited its support. We continued to give two reports yearly; one containing the history of the institution during the preceding year, about the time of the new subscription; the second containing the yearly balance and an explananatory account. The originals were lest open for inspection of the public at large.

A short extract of these reports will best shew the result of our endeavours. I shall arrange them according to the objects of our expences, adding some necessary illustrations, taking only the first and the last year, unless some observations may occur on the expence of some particular years. I refer, at the same time, to the table annexed, for the general comparison of the expences of the several years.

1. We found 3903 families, making 7391 individual, 4-7ths women, 2-7ths children, 1-7th

C

men, in the highest want of immediate relief. A great part of them had not seen a bed for many years; and the misery of those who were not yet turned beggars, exceeds all description.

The sum paid them in weekly allowance during the sirst eight months, being on an average of twelve pence a-week for each family, was, - - L. 6729 0 0

During the second year, - 8297 0 0

Third year, - - 9318 0 0

Average of the first 23 years, L. 9129 0 0

The house-rent allowed to the poor was, - - 2100 0 0

THE first cloathing of this asarming number of poor would indeed have exceeded even the powerful support the institution enjoyed, had not our ladies largely contributed ready-made shirts thirts and cloathing, as foon as they knew how much they were wanted. Still this expence was, on the average of the first three years, L. 977. It may not be uninstructive to add, that we tried in the first year to buy potatoes and fuel for the poor, and distribute it amongst them at the first cost: But experience shewed us, what afterwards I have seen confirmed every where,

- 1. That it is impossible to prevent waste, if not robbery.
- 2. That the poor have a dislike to what you oblige them to buy.
- 3. That giving large portions, you encourage the practice of felling it out again.
- 4. That when small portions are given, the loss of time for setching them, which is considerable when such a number must be provided, makes it expensive to every industrious pauper, even if he was to get them for nothing.
 - 5. That the necessary housing and storing,
 G 2 together

together with the number of necessary officers, make it very expensive to the institution.

WE found it cheaper, and the poor found it more convenient, to receive, instead of the extraordinary supply, four pence a-week, and to buy for themselves. Some overseers took the trouble to provide it for sisteen or twenty samiles under their care: where this was done, the poor got it best and cheapest.

A different plan may do, where the community is very small, or where the poor are not taught to know the value of their time.

THE depth of misery in which we found our poor, subjected us to another unexpected expence. The itch was become so general, and had so perfectly insected the workhouse to which some poor were always sent for correction, that neither there nor in the narrow lanes and alleys, where the poor live crowded together, the cure

was possible. We were obliged to establish a temporary lazzaretto out of town, where we sent the most infected, and had in three years, made it superfluous. This has yet occasioned an additional expence of L.438, in each of the first three years.

A very heavy expence was incurred by the purchasing of spinning wheels and other tools, and by the establishment and maintenance of a school, where, for the first years, five hundred poor at a time were taught to spin: the indemnification for their loss of time during learning, was paid them, as well as the loss upon their work. The fum of these expences amounted to L. 1175 a-year. But after three years, two thousand poor, who at the time they entered the school could do nothing at all, did earn from eight pence to twenty pence a week, at fuch time and at fuch hours as were formerly quite lost to them; upwards of three thousand wheels were in their hands, and the din of induftry

dustry was heard, where sloth or riot had inhabited before.

Our schools, which at the time of their establishment were a collection of the most abandoned and profligate children, most of whom had been used to beg, required a great length of time before they could do even as much as to give to these unhappy creatures the habit of fixing their attention upon any work, not to speak of instruction. Gentle means and perseverance got at last the better of great part of the vices that grow in children who are trained up to begging.

Our medical institution got sooner to its perfection. I must refer to an excellent report on that subject, in the first volume of our yearly reports.

of fick had been 12,969, whose cure had, including broth, &c. not cost 3 s. 6 d. each.

It is evident how much we faved by not having a falaried apothecary, nor a particularly appropriated house.

WE employed always fome poor women as nurses when the family could not attend the patient, and found them of very great use in fetching the medicines, and reporting to the physician about the health of the patient.

WITH this flight addition, we thought that, a very few cases excepted, the result of our experience was unfavourable to hospitals.

THE patient is more comfortable in his own bed amongst his family and his neighbours, gets into no habits of idleness, and employs usefully the moments of his convalescence. The fact proves, that it is also the cheapest method.

Our expence at the end of three years amounted to - L.44085 0 0

Carried forward, L. 44085 0 0

Brought forward, L. 44085 0 0

It had been annually increasing; private charity ceafing, all poor at last had recourse to the means offered them: from a corrupted race, however, little good could be expected; and what education we had been able to give, could not yet have any fensible effect. It was still the time of struggle; but the public, who always knew perfectly all circumstances, supported us chearfully, notwithstanding the receipt of 41596 0 0 in three years (Vid. Tab.) fell fhort of our expenditure by the fum of - L. 2489 0 0

Desirous, on our fide, to fave for the public what we possibly could, we subjected again all our expences to a new scrutiny, of which the result is contained in the sourceenth Report. It seemed that the overseers had slackened a little

in attending to the work of the poor. The committee for the manufactures had found, that in 1791 but half the usual quantity of yarn had been spun; yet the allowances had rather been increased, without an augmentation of the poor. The rules were anew enforced in the beginning of fummer, as the most proper seafon; and at the approach of winter, all those who needed affiftance from want of work, inflead of getting the usual augmentation from the overfeer, were fent to the committee, who either gave them work, or procured them employment from tradefmen and manufacturers, with whom they had connected themselves for that purpose. This was in some respects expensive, but became a very great faving, as it had the effect, that out of 276 poor who applied for an augmentation of allowance from want of work, only forty accepted of the work offered them. During that year, 3000 bundles of yarn more were fpun, 300 children more went to school, and the institution saved L. 1250, which would have fallen to the share of idle-

H

ness, and which is nearly the amount of the greater earnings of the poor in that year.

I infift upon those facts, because they prove, not only the wisdom of a measure which makes the relief of the poor dependent on their induftry, and obliges them to a kind of work, the produce of which is the undoubted measure of the exertions they employed; but because they prove also the necessity of enforcing this measure, daily enfeebled by the cunning, and the obvious mifery of the lazy poor, operating on the fenfibility of the overfeers. It is undoubtedly the most difficult part of their duty, to shut their ears to the cries of misery, and leave those to their fate who will not comply with the conditions under which they are to be relieved. We have feen incredible inftances of hardship fuffered, rather than go to work, or fend their children to school. If, in fingle instances, indulgence is shewn, where, according to the law, it ought not, then all is loft: abuse creeps in, and in a short time this weekly allowance be-

(3)50

comes

comes a pension, that supersedes the necessity of working; then it becomes a matter of savour and protection, and the whole a system of corruption;—worse a thousand times by being so systematized, than if no provision had been made, and if every thing had been trusted to chance, and to the exertions of private benevolence. These premiums held out to vice, must of course increase the number of the idle and the profligate: and what must be the seelings of the honest industrious workman, who, with the utmost exertions of his strength, hardly earns the bare necessaries of life, when, next to his door, Sloth sits in undeserved ease, and reaps where it has not sown!

It is literally true, that where no man can perish for want, many will be idle; and that the natural course of things in ninety-nine cases out of a hundred, would have forced the wretch to labour, and perhaps secured him comfort, if Pity, like an unskilful physician, had not stept in, and, by a palliative remedy,

H 2

prevented

fafely ascribe that success I am going to show you in the account of the last year, to our steadiness in adhering to this fundamental principle. It is from the beginning of 1792 we began to feel its good effect.

Commence and the State encountry

IN 1793, the number of our poor families was reduced to 3234, to more than 1-6th less than what they were at the time of the establishment; the sum of their allowance in money and house-rent, to L. 9678, which is L. 1422 less than the average of the first years.

YET this difference is so little owing to an increase of mortality among the poor, that we have, on the contrary, witnessed the most satisfactory effects, not only of our early assistance in sickness, by attention, medicines, and a better diet; but what I think still more, by the cleanliness and comfort of dress, warmer lodgings, and the prodigious influence industrious activity

year 1790-91, the number of new claimants

was - - - 431

In 1792-93, only - - 119

The reduction of this traffic of beggary, as foon as it was known, was fo profitable to our city, that in the year 1792, only 126 vagrants were fent out with a viaticum, when the number in 1791 had been 272.

Not only the number of fick among our poor had decreased from 3710 successively to 2672 in 1793, but the mortality among the fick had diminished in that surprising proportion:

In 1788-89, - - 7 per cent.

1789-90, - - 6

1790-91, - - 5

1791-92, - - $4\frac{1}{3}$

The private medical inflitution that preceded ours had an average mortality of 11 per cent. May all good and humane men share the heartheart-felt pleasure with which I relate these facts!

THE better cloathing of the poor was now mostly confined to the children, whose rags were now all changed to decent dress; yet the average expense of the last three years was not above L. 689 per annum.

ora good tell rolls

The schools for teaching spinning to the grown people were no longer necessary. 3354 spinning wheels had been distributed to such as had proved themselves able to spin. Several hundreds of these were constantly, and all of them occasionally, employed in spinning, when a more lucrative employment was not to be found. The average of all expences attending the employment of the poor, during the last three years, including the loss at the sale of the manufactured goods, was L. 611 per annum. We calculated that, to procure to a pauper the means of earning, in the worst

worst case, five guineas a-year, had cost us half a guinea.

I trace with pleasure these progressive steps, by which our institution, after having relieved the first wants of the poor, enabled us to apply a greater share of our funds and of our attention to one of the most effectual means of preventing misery,—the better education of children.

A plan had been laid down and agreed upon in 1788, which we now began to execute, but on which many improvements remain to be made. It is contained in pag. 144. of the Reports.

Thus far we had, in 1794, been able to go.

WE had established three kinds of schools, one for such children as had no other employment.

ment. After the proper divisions of fexes and ages, they were again divided into classes. where their employment changed with their age: Spinning, knitting, weaving, and plain work, were taught them in the different classes of the school of industry: but we took care to make the infruction in the schools of morality and religion, reading and writing, go hand in hand with the increase of their capacity for work; fo that, at the age of fixteen, we might with fafety recommend them to places in decent families. We were fo lucky as to put, in 1792 and 1793, about 260 girls and boys into fervice, who a few years before were covered with rags and vermin, weakened in their constitution, and immersed in vice. Most of them have turned out well. The boys went to sea, or to different trades. The number of children that in 1793 had been in the schools, was 2046.

WE not only made a point to finish entirely whenever they left fervice again, we continued to offer them such a temporary support, as might diminish the danger of their relapsing from actual want, into vice and profligacy.

2. Other classes of instruction-schools were opened in the evening hours, for such children as work in the day-time for manufacturers or for their parents, and who gain in that manner more than they can or ought to gain in our establishment.

It is perhaps not out of place to observe here, that we are very anxious to settle at a very moderate sum, what could be gained by the poor children, when employed in constant work that required no particular skill; as we were determined to pay their labour something lower than the rates paid by the manufacturers.

THE

THE prejudice to the individuals, and the detriment to industry, that must necessarily refult from the smallest inattention to this point, is obvious.

3. We established Sunday-schools for such children as were employed through the whole week, and which many of those girls continued to attend that had been brought into service.

In these schools, there were now upwards of 600 children, all of such parents as received support from the institution, and whose decent appearance in the Sunday-schools was remarkably pleasing.

THE average amount of the expence for the last three years, was L. 700 per annum.

THE whole of our expence for the year 1793-94 amounted to L. 14773 0 0 Our revenues were - 16917 0 0

Hence an exceeding revenue of L. 2144 0 0

It is but justice to the beneficence of the citizens of Hamburgh to mention, that this encrease is greatly owing to their contributing largely to put the revenue upon an equal footing with the necessary expenditure.

Our institution has only two sources of revenue, independent of public benevolence, and of the satisfaction of the public with the meafures of its administration.

They are, a contribution levied upon the apparent fortunes, amounting to L. 2000 0 0

And \frac{1}{2} per cent. of the amount of goods fold by public fale, with \frac{1}{4} \quad \text{Carried forward L. 2000 0 0}

Brought forward, L. 2000 o o of the brokerage of them. This, upon an average, is about 2300 o o

L. 4300 0 0

Thus the institution is dependent for more than ten thousand pounds on the annual charity of the public.

This, joined to the publicity of the accounts, is, I believe, the third cause of our success. It is this only that prevents all institutions of this kind from becoming a job, the directors from being careless of the public approbation or censure, and the whole administration from falling into the hands of under officers, who afterwards know so well how to embroil the business, that no subsequent director ever is able to unravel the clue.

This at least is the history of nearly all the

the workhouses and of many hospitals in Eu-

It may be worth while to remark, that in an inflitution, where L. 14,000 are yearly received and paid in small sums, and where books of every description are regularly kept; where the subscriptions must be collected; and where beside personal attendance, numberless messages are necessary between the directors and the overseers, the overseer and the treasurer, and the overseer and the poor;—that all these details are managed and executed by eleven officers, whose salary does not exceed L. 400, and sifty poor, who get 1 s. per week, perhaps, more than what the institution would be obliged to allow them.

THE means by which the remainder of the fums wanted and collected, are,

average, brought yearly - L. 5850 0 0

Carried forward, L. 5850 0 0

Brought forward, 5850 0 0 and fince the fecond year never varied L. 200.

2. A weekly collection through all the houses of the town who had not subscribed, - - - 1340 0 0

3. Unsubscribed donations. This indeed is one of the most interesting sources of our income, in respect to the feelings that occasion them. Some of them the expressions of gratitude of a merchant, who has either escaped some loss, or gained some unexpected profit. Others a joint donation made by two disputing parties, of the sum about which they disagreed. A considerable part, the produce of near 3000 poor boxes, kept in different samilies, in order that their children or their servants may have an

Carried forward, L. 7190 0 9

Brought forward, L. 7190 0 0 opportunity of indulging their pity; and where, in the midst of jovial conviviality, many a collection is made for the poor. They ferve too in the counting-houses of the merchants for collecting a trifle, when a bargain is concluded, or when at the end of the year large accounts are paid. And they are presented to strangers in the hotels, who thus enjoy the pleafure of doing good, without being tormented by the aspect of disgusting misery. This sum amounts to an average of -1375 0 0 Legacies, which have yet only amounted to an yearly average of 200 o Half of the money collected in the churches on Sundays - 1050 0 0 Two extraordinary collections in

Carried forward, L. 9815 0 0

Brought forward, L. 9815 0 0 the churches, the one intended to fupply the cloathing, the other the extraordinary fuel for the poor, - - 1430 0 0

Annually contributed by L. 11245 0 0 public benevolence,

I would stop here, if I did not recollect many a conversation with several of the respectable men to whom this letter is addressed, the result of which was, that relieving the present distress, though the first essential thing in providing for the poor, is by no means the most dissipation. That the less easy task is, to distribute these supplies in such a manner as may not, by encreasing the number of the poor, leave ragement to vice and idleness; and that, even after the attainment of this object, much remains to be done by the friends of humanity. An investigation of the sources of poverty, we often thought, might indicate the means of preventing the evil; and might suggest such measures for supporting the falling, as would, in many cases, counteract those combinations of circumstances, which impose on a man the dishonourable necessity of throwing himself on the charity of the public.

But I do not presume to give my ideas, I enly wish to state facts.
